

## Experiment 4

**Student Name:** Harjot Singh

**Branch:** B.E CSE

**Semester:** 6<sup>th</sup>

**Subject:** PBLJ

**UID:** 22BCS16214

**Section:** IOT-643-A

**DOP:**24/02/25

**Subject Code:** 22CSH-359

### **Aim:**

Develop Java programs using core concepts such as data structures, collections, and multithreading to manage and manipulate data.

### **Problem Statement :**

- 1) Write a Java program to implement an ArrayList that stores employee details (ID, Name, and Salary). Allow users to add, update, remove, and search employees.
- 2) Create a program to collect and store all the cards to assist the users in finding all the cards in a given symbol using Collection interface.
- 3) Develop a ticket booking system with synchronized threads to ensure no double booking of seats. Use thread priorities to simulate VIP bookings being processed first.

### **Algorithm:**

#### **1. Employee Management (Using ArrayList)**

- Initialize an ArrayList to store employees.
- Display a menu with options: Add, Update, Remove, Search, and Exit.
- **Add Employee:**
  - Take user input for ID, Name, and Salary.
  - Create an Employee object and add it to the list.
- **Update Employee:**
  - Ask for the Employee ID.
  - If found, update Name and Salary.
- **Remove Employee:**
  - Ask for the Employee ID.
  - Remove matching employee from the list.
- **Search Employee:**
  - Ask for the Employee ID.
  - If found, display details.

- Repeat until the user chooses to exit.

## 2. Card Collection (Using Collections)

- Initialize an ArrayList to store Card objects.
- Display a menu with options: Add Card, Find Cards by Symbol, and Exit.
- **Add Card:**
  - Ask for card symbol (e.g., Hearts, Diamonds).
  - Ask for card value (A, 2, 3, ... J, Q, K).
  - Create a Card object and store it in the list.
- **Find Cards by Symbol:**
  - Ask for a symbol.
    - Search and display all cards with that symbol.
- Repeat until the user chooses to exit.

## 3. Ticket Booking System (Multithreading)

- Create a TicketBookingSystem with a limited number of seats.
- Implement synchronized booking to prevent double booking.
- Create Customer threads with different priorities (VIP first).
- **Each Customer thread:**
  - Tries to book a ticket.
  - If seats are available, booking is confirmed, and the seat count decreases.
  - If not, booking fails.
- Start all customer threads and process bookings.
- Stop when all threads have completed execution.

### Program :

#### 1. Employee Management:

```
import java.util.ArrayList;
import java.util.Scanner;
class Employee {
    int id;
    String name;
    double salary;
    Employee(int id, String name, double salary)
    { this.id = id;
      this.name = name;
      this.salary = salary;
    }
}
```

```
    public String toString() {  
        return "ID: " + id + ", Name: " + name + ", Salary: " + salary;  
    }  
}  
  
public class EmployeeManager {  
    static ArrayList<Employee> employees = new ArrayList<>();  
    static Scanner scanner = new Scanner(System.in);  
    public static void addEmployee()  
    { System.out.print("Enter ID: ");  
      int id = scanner.nextInt();  
      scanner.nextLine();  
      System.out.print("Enter Name: ");  
      String name = scanner.nextLine();  
      System.out.print("Enter Salary: ");  
      double salary = scanner.nextDouble();  
      employees.add(new Employee(id, name, salary));  
      System.out.println("Employee added successfully!");  
    }  
    public static void updateEmployee()  
    { System.out.print("Enter Employee ID to update: ");  
      int id = scanner.nextInt();  
      for (Employee emp : employees) {  
          if (emp.id == id) {  
              scanner.nextLine();  
              System.out.print("Enter New Name: ");  
              emp.name = scanner.nextLine();  
              System.out.print("Enter New Salary: ");  
              emp.salary = scanner.nextDouble();  
              System.out.println("Employee updated successfully!");  
              return;  
          }  
      }  
      System.out.println("Employee not found.");  
    }  
    public static void removeEmployee()  
    { System.out.print("Enter Employee ID to remove:  
      "); int id = scanner.nextInt();  
      employees.removeIf(emp -> emp.id == id);  
      System.out.println("Employee removed successfully!");  
    }  
    public static void searchEmployee()
```

# DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
{ System.out.print("Enter Employee ID to search:"); int id = scanner.nextInt();  
for (Employee emp : employees) {  
    if (emp.id == id) {  
        System.out.println(emp);  
        return;  
    }  
}
```

```
    }  
    System.out.println("Employee not found.");  
}  
public static void main(String[] args)  
{ while (true) {  
    System.out.println("\n1. Add Employee\n2. Update Employee\n3. Remove  
Employee\n4. Search Employee\n5. Exit");  
    System.out.print("Choose an option: ");  
    int choice = scanner.nextInt();  
    switch (choice) {  
        case 1 -> addEmployee();  
        case 2 -> updateEmployee();  
        case 3 -> removeEmployee();  
        case 4 -> searchEmployee();  
        case 5 -> System.exit(0);  
        default -> System.out.println("Invalid choice! Try again.");  
    } } } }
```

## 2. Card Collection :

```
import java.util.*;  
class Card {  
    String symbol;  
    String value;  
    Card(String symbol, String value)  
    { this.symbol = symbol;  
      this.value = value;  
    }  
    public String toString() {  
        return value + " of " + symbol;  
    }  
}  
public class CardCollection {  
    static ArrayList<Card> deck = new ArrayList<>();  
    static Scanner scanner = new Scanner(System.in);  
    public static void addCard() {  
        System.out.print("Enter Symbol (Hearts, Diamonds, etc.): ");  
        String symbol = scanner.next();  
        System.out.print("Enter Value (A, 2, 3, ... J, Q, K): ");  
        String value = scanner.next();  
        deck.add(new Card(symbol, value));  
    }  
}
```

```
        System.out.println("Card added successfully!");
    }

    public static void findCardsBySymbol()
    { System.out.print("Enter Symbol to search for: ");
      String symbol = scanner.next();
      System.out.println("Cards found:");
      for (Card card : deck) {
          if (card.symbol.equalsIgnoreCase(symbol))
              { System.out.println(card);
            }
        }
    }
    public static void main(String[] args)
    { while (true) {
        System.out.println("\n1. Add Card\n2. Find Cards by Symbol\n3. Exit");
        System.out.print("Choose an option: ");
        int choice = scanner.nextInt();
        switch (choice) {
            case 1 -> addCard();
            case 2 -> findCardsBySymbol();
            case 3 -> System.exit(0);
            default -> System.out.println("Invalid choice! Try again.");
        }
    }
}
```

### 3. Ticket Booking System:

```
import java.util.*;
class TicketBookingSystem
{ private int vipSeats,
  regularSeats;
  public TicketBookingSystem(int vipSeats, int regularSeats)
  { this.vipSeats = vipSeats;
    this.regularSeats = regularSeats;
  }
  public synchronized boolean bookTicket(String customerName, String type)
  { if (type.equals("VIP") && vipSeats > 0) {
      System.out.println(customerName + " booked a VIP ticket. Remaining VIP seats: "
+ (--vipSeats));
      return true;
    }
    else if (type.equals("Regular") && regularSeats > 0)
        { System.out.println(customerName + " booked a Regular ticket. Remaining
```

```
        Regular seats: " + (--regularSeats));
        return true;
    }
    else {
        System.out.println(customerName + " failed to book a " + type + " ticket
        (No " + type + " seats available).");
        return false;
    } } }

class Customer extends Thread {
    private TicketBookingSystem bookingSystem;
    private String name, type;
    public Customer(TicketBookingSystem bookingSystem, String name, String type,
    int priority) {
        this.bookingSystem = bookingSystem;
        this.name = name;
        this.type = type;
        this.setPriority(priority);
    }
    public void run()
    { bookingSystem.bookTicket(name, type);
    } }

public class TicketBooking {
    public static void main(String[] args)
    { Scanner scanner = new
    Scanner(System.in);
    System.out.print("Enter number of VIP seats: ");
    int vipSeats = scanner.nextInt();
    System.out.print("Enter number of Regular seats: ");
    int regularSeats = scanner.nextInt();
    TicketBookingSystem system = new TicketBookingSystem(vipSeats, regularSeats);
    System.out.print("Enter number of customers: ");
    int n = scanner.nextInt();
    scanner.nextLine();
    Customer[] customers = new Customer[n];
    for (int i = 0; i < n; i++) {
        System.out.print("Enter customer name: ");
        String name = scanner.nextLine();
        System.out.print("Enter priority (1 for VIP, 2 for Regular): ");
        int priority = scanner.nextInt();
        scanner.nextLine();
        String type = (priority == 1) ? "VIP" : "Regular";
```

```
int threadPriority = (priority == 1) ? Thread.MAX_PRIORITY :
Thread.NORM_PRIORITY;
customers[i] = new Customer(system, name, type, threadPriority);
}
System.out.println("\nStarting booking process...");
for (Customer c : customers) c.start();
scanner.close();
} }
```

## OUTPUT :

### 1. Employee Management:

```
(base) harjotsingh@HARJOTs-MacBook-Pro exp 4 and 5 %
.java && java exp41
```

```
1. Add Employee
2. Update Employee
3. Remove Employee
4. Search Employee
5. Exit
Choose an option: 1
Enter ID: 16214
Enter Name: HARJOT
Enter Salary: 5000000
Employee added successfully!
```

```
1. Add Employee
2. Update Employee
3. Remove Employee
4. Search Employee
5. Exit
Choose an option: 2
Enter Employee ID to update: 16214
Enter New Name: HARJOT SINGH
Enter New Salary: 60000000
Employee updated successfully!
```

```
1. Add Employee
2. Update Employee
3. Remove Employee
4. Search Employee
5. Exit
Choose an option: 5
```

**2. Card Collection :**

```
● (base) harjotsingh@HARJOTs-MacBook-Pro exp 4 and  
collection.java && java CardCollection  
  
1. Add Card  
2. Find Cards by Symbol  
3. Exit  
Choose an option: 1  
Enter Symbol (Hearts, Diamonds, etc.): Diamonds  
Enter Value (A, 2, 3, ... J, Q, K): A  
Card added successfully!  
  
1. Add Card  
2. Find Cards by Symbol  
3. Exit  
Choose an option: 3  
○ (base) harjotsingh@HARJOTs-MacBook-Pro exp 4 and
```

### 3. Ticket Booking System:

```
● (base) harjotsingh@HARJOTs-MacBook-Pro exp 4 and 5 % cd "/Us
tBooking.java && java TicketBooking
Enter number of VIP seats: 2
Enter number of Regular seats: 4
Enter number of customers: 3
Enter customer name: HARJOT
Enter priority (1 for VIP, 2 for Regular): 1
Enter customer name: RONIT
Enter priority (1 for VIP, 2 for Regular): 1
Enter customer name: PRINCE
Enter priority (1 for VIP, 2 for Regular): 2

Starting booking process...
HARJOT booked a VIP ticket. Remaining VIP seats: 1
PRINCE booked a Regular ticket. Remaining Regular seats: 3
RONIT booked a VIP ticket. Remaining VIP seats: 0
○ (base) harjotsingh@HARJOTs-MacBook-Pro exp 4 and 5 % █
```

#### Learning Outcomes:

- **Object-Oriented Design** (Classes for real-world entities)
- **Core Programming Skills** (Loops, conditionals, methods for inventory operations)
- **Data Structure Usage** (ArrayList for dynamic data management)
- **User-Friendly Systems** (Intuitive interface with error handling)
